EDUCATION

New York University, *Bachelor of Arts in Math and Computer Science* *September 2022 - May 2026*

- Coursework: Artificial Intelligence, Object Oriented Programming, Software Engineering, Operating Systems
- Leadership: Delta Gamma - *Director of New Members*, Pulse Dance Company - *Choreographer*, NYU Tisch Dancers of Colour Alliance - *Executive Board*

EXPERIENCE

Deloitte *December 2025 - March 2026*
Data Analytics Intern *Hong Kong*

- Validated AI-generated code and query outputs by testing against sample data, implementing input validation and try/catch error handing in the pipeline, ensuring accuracy before applying scripts to production datasets
- Built reusable and modular Python scripts using internal AI tools to automate a manual process, increasing efficiency by 70%
- Accelerated complex SQL query drafting with AI assistance and refined logic to ensure accuracy across large-scale datasets, improving productivity by over 25%

Google Developer Group *September 2025 - December 2025*
Tech Lead *New York, NY*

- Mentored and guided 4 team members through technical concepts by explaining Node.js and Firebase implementation details, helping less experienced members apply them correctly in their assigned tasks
- Broke down large project tasks into manageable units by decomposing high-level features into smaller, assignable specified pieces of work for the team by assigning tasks based on scope and team capacity, ensuring balanced workloads throughout the sprint cycle
- Enabled smooth team collaboration by managing version control through Git and GitHub, coordinating code changes and reducing merge conflicts across contributors

PROJECTS & HACKATHONS

em.care (2nd Place @ Google x Ruth.AI Hackathon) | *React, Typescript, Python* *October 2026*

- Built a full-stack AI health companion for women (React/TypeScript, FastAPI, Gemini) that turns doctor visits into plain-language action items, with a running history of appointments, labs, records, and insurance coverage in one place.
- Integrated Gemini Live to power a real-time voice companion, streaming mic audio over WebSockets so users can check in hands-free. It can also book appointments and adjust care plans after spoken confirmation.
- Designed safety guardrails for health AI: urgent warning signs trigger fixed escalation text instead of model-generated wording, and the app never diagnoses or advises on medication changes. Mood and energy check-ins feed personalized, pregnancy-aware next-step suggestions across two user personas.

TradingJoe (Hackathon - Pathfinders Challenge) | *React Native, Javascript, MongoDB* *August 2026 - Present*

- Developed a full-stack mobile application end-to-end in 96 hours by leveraging Claude Code and Codex agents
- Authored a specification and rules markdown file by outlining project requirements and constraints, ensuring AI agent maintained accurate context and adhered to design decisions throughout development
- Diagnosed and resolved bugs in AI-generated code by performing initial debugging independently to isolate the root cause before directing the AI agent to a targeted deep-dive fix

Atlas | *React, Python, PostgreSQL, Docker* *June 2026 - Present*

- Debugged and refined AI-generated code throughout the software development lifecycle by reviewing agent output against project requirements, ensuring correctness before integrating changes
- Accelerated architecture planning by leveraging AI planning agents (Codex, Claude Code) to evaluate design approaches before implementation, reducing time from concept to build
- Designing scalable backend services and normalized relational database schemas to support authentication, CRUD operations, social interactions, and collaborative travel planning

LANGUAGES, SKILLS, AND INTERESTS

Languages: English (native), Cantonese (native), Mandarin (fluent)
Technical Skills: Python, Java, JavaScript, SQL, C/C++, React, PostgreSQL, MongoDB, Docker, Git, REST APIs
AI-Assisted Development: Codex, Claude Code | **Data & Analytics:** Pandas, Excel, Data Validation, Debugging
Engineering: Software Testing, PyTest, Unit Testing, Agile Workflows, Deployment
Interests: Dance (Contemporary, Ballet, Jazz, Hip-Hop), Pool, Taichi (Hong Kong Champion), Knitting, Climbing
